WITH ASTRO-CELL PLUS, WE WON'T "POP YOUR BUBBLE"

Our standard bubble pack is now Astro-Cell Plus. This air cellular packaging material employs a thin, co-extruded barrier film that is 100 times more resistant to the passage of air. Most standard bubble is made from a single layer of polyethylene. Our "Plus" product is a product that retains its air and cushioning power much longer and under greater pressure than competitive, non-barrier bubble. It is stronger, lighter and more flexible - perfect for the intermediate shipping cycle.

PRODUCT	ITEM NO.	THICKNESS	BUNDLE SIZE
LPC-Plus	45000	1/2"	48" X 250'
MPC-Plus	44900	5/16"	48" X 375'
SPC-Plus	44824	3/16"	48" X 750'
VPC-Plus	45472	1/8"	48" X 100'

Bubble is sold by the bundle. A bundle is either 48" wide or 72" wide. We slit our bubble, in house, with our custom slitter. For example, you can order a bundle of 48" wide slit to 4 rolls of 12" wide. Bubble can also be cross-perforated across the width of the bundle. Standard increments of cross-perforations are 6". Custom perforations are readily available as well.
